

Invited Local Pilot Program

How qualified professionals can evaluate Production Package Doctor on real production packages.

Program essentials

- **Invited local Pilot only.** Participation is by invitation; there is no public download.
- **30 calendar days** beginning after the first successful real-package audit.
- **Up to five distinct recognized real production packages.** Re-reviewing the same recognized package does not silently create a new package identity.
- **Seven-day offline access** is a refresh window, not the Pilot duration.
- **One license is bound to one activated installation.**
- **Package contents and reports remain on the participant's computer; only limited authorization, device, and Pilot-accounting traffic may use the network.**

What to expect during the Pilot

Participants select their own production packages, run audits in Strict or Best-Effort Mode, and review the resulting HTML and JSON reports. Feedback about package sources, current QC workflows, and report usefulness helps shape later releases.

Request an invitation

If you receive production packages regularly and want to see how the product handles your own package sources, request a 15-minute Demo first.
